SUMMARY

DevOps Engineer at the Buenos Aires City Government, operating an OpenShift cluster with 1,000+ namespaces and declarative CI/CD, specialized in troubleshooting platform, observability and pipeline incidents. I am steering my career toward DevSecOps: static analysis and secret detection at scale, software supply chain security and platform hardening. Background in full-stack development; currently studying Data Analytics.

WORK EXPERIENCE

ASI · TECBA · Buenos Aires City Government

2025 - Present

DevOps Engineer

- Technical point of contact for process improvement across development, infrastructure and vendor teams.
- Built an automated security audit (Python scripts with gitleaks and Semgrep, 1,100+ rules) across ~700 repositories, with consolidated per-project and per-file reports for development teams.
- Took part in migrating the repositories to a new GitLab platform, resolving the impact on ~570 Tekton pipelines (DNS, SSH credentials and connectivity through F5).
- Designed with Red Hat the golden path for Red Hat Developer Hub (Backstage) and support its rollout with client teams: pilot applications, template and pipeline gaps, and non-standard cases.
- Contributed to GitOps secret management with Sealed Secrets: a Tekton pipeline that encrypts secrets and versions them in the manifests repository.
- Resolved a 100% full Loki WAL: identified a stuck checkpoint as the root cause and recovered the service without restarting pods, preventing log loss.
- Found that cluster workers had 99% of CPU reserved against 7-43% actual usage, and built an analysis of oversized resource requests across ~4,500 pods.
- Built Grafana observability dashboards and Python automations with Jira Cloud, and drive a centralized component catalog as the single source of truth for ticketing and observability.

EduAnalytica

2020 - 2025

Fullstack Web Developer

- Led the design, development and maintenance of a web management platform for schools.
- Coordinated a team of 3 developers: task planning, code review and technical mentoring.
- Gathered requirements from teachers and school staff and turned them into concrete features.
- Migrated from dedicated servers to VPS, cutting costs, and improved application performance.
- Stack: Python, Django, DRF, Celery, MySQL, React, HTMX, Docker, React Native.

SKILLS

Platform: OpenShift · Kubernetes · Docker · Linux · Varnish · NFS · S3

CI/CD & GitOps: Tekton · ArgoCD · GitLab · RHDH (Backstage) · Nexus · S2I

Security: Sealed Secrets · Keycloak / OIDC · gitleaks · Semgrep · SonarQube

Observability & ITSM: Loki · Grafana · Elastic · Kibana · Jira · InvGate · ManageEngine

Programming & Data: Python · Bash · PostgreSQL · MariaDB · OracleDB · MongoDB

Languages: Spanish (native) · English B1 (reading, writing and listening; speaking in progress)

EDUCATION & CERTIFICATIONS

Bachelor's in Data Management and Analytics · UNSL

2027

Oracle Cloud Infrastructure 2025 Foundations Associate · Oracle

2025
